

Here you will find the instructions to help you create your assignment solutions in LaTeX.

1. Go to the Overleaf website and sign up via the button located at the top right of the page. A free account is more than adequate for the requirements of STA5ARM.
2. Once you've signed in, create a new project by clicking the 'New project' button. Then simply select the 'Blank Paper' choices under 'Basics'.
3. You can download the Assign1_StNo.tex file into overleaf by clicking the 'Project' button in the Overleaf toolbar. Then click on the 'files' button and select 'Computer'. Then drag the Assign1_StNo.tex file into the 'Upload Files' section. Also make sure that you download the Figure_1.pdf file into Overleaf so no errors are displayed when converting the LaTeX script, contained in the Assign1_StNo.tex file, to a pdf document.
4. Select the Assign1_StNo.tex file under the 'files' section. The script in this file will then be displayed in the left window and the corresponding pdf document will be displayed in the right window. The pdf document will automatically update when changes are made to the LaTeX script in the left window.
5. Familiarise yourself with the other items of the Overleaf interface.
