

# To Connect to the Server

These servers eecad101-->eecad101 have python3.7 loaded.  
Sync classes can use eecad101/102 (102 has lower usage)  
To get Python 3.7, use the python3.7 on the command line.

For both:

```
ssh asurite@computer_name.eas.asu.edu
```

If your first time connecting to this server, answer yes.

Either way, your asurite password comes next.

Note that the connection will terminate due to lack of activity fairly quickly. This is normal.
