

## **Data analysis project FAQ**

**Q: What do we do with missing values when computing scales?**

**A:** <https://forum.jamovi.org/viewtopic.php?f=6&t=774&start=10>

**Q: You said we're not allowed to delete rows or columns or outliers... but what about that one person who said they are 2000 yrs old?**

**A:** Ok fine - you're allowed to delete the number 2000. That's just ridiculous.

**Q: There is a test or stat I think I need to do in jamovi, but we did not do exactly this test in tutorial. What should I do?**

**A:** Use your resources! You now have websites, textbooks, and Youtube channels (plus Google!) on jamovi at your disposal to identify the correct test or process.

**Q: For some statistical tests, it's not obvious what test to select in G\*Power for the power analysis... can you help?**

**A:** You're right, some of it is pretty confusing. Here are some tips -

Correlation: Family = Exact, Test: Correlation Bivariate Normal Model.

Simple linear regression: Family = t, Test: Linear Bivariate Regression One Group Size of Slope

Chi-Square Test of Independence: Family = Chi-Sq, Test: Goodness of fit
