

Unit 1 Module 4 Project

Unit 1 Module 4 Project

Once your work is completed for Unit 1, Module 4 Activities and Practices; complete the following programs with a partner. I will select your partner for you. You can do this in one program.

1. Write a program that adds all even numbers between 1 and 100. - You will need a while loop

2. Write a program that multiplies all odd numbers between 1 and 50. - You will need a while loop

3. Write a program that collects string input (words) until the user enters STOP. Combine the strings into a sentence. - You will need a while loop

4. Write a grade book program that allows a user to specify the highest possible grade and then enter individual assignment grades. Do not permit the input of grades over the specified highest value, or negative grades. Provide the user with the average of the grades.
