

## MIS772 – Predictive Analytics – Trimester 1 2023

### Assessment Task 2 – Report (Analytical) – Individual

<b>DUE DATE:</b>	<b>Thursday, 11 May 2023, by 8:00pm (Melbourne time)</b>
<b>PERCENTAGE OF FINAL GRADE:</b>	<b>30%</b>
<b>WORD COUNT:</b>	<b>Maximum number of words: 3000</b>

---

## Description

### Purpose

This task provides you with opportunities to understand and apply predictive analytics techniques in real-world situations (ULO2), and to apply your understanding of current techniques and trends in predictive analytics to a particular business environment (ULO3), as outlined below. By completing this task, you will develop discipline-specific knowledge and capabilities to demonstrate your understanding of the application of business analytics (GLO1), including digital literacy and expertise in using analytics technologies to analyse complex business data and disseminate findings (GLO3).

### Business context and scenario

The business context for this assignment is the domestic tourism sector, focusing on providers of tourist accommodation. Organisations such as AirBnB provide a digital platform that tourists can use to rent properties in particular locations around the world. The properties are owned by private individuals (property hosts), and AirBnB takes a commission for bookings via their digital platform.

AirBnB approached you again to develop RapidMiner process(es) capable of analysing and predicting customer feedback about their stay at Melbourne Airbnb rental properties. AirBnB provided you with a sample dataset of approximately 1,000 rental listings and 100,000 associated customer reviews. This sample dataset can be downloaded from the unit website.

The provided dataset (A2-AirBNB-Melbourne-dataset.zip) has been partially cleaned up and includes a variety of numerical, nominal and text attributes, and descriptions of these attributes.

You are also provided with a list of commonly used positive and negative sentiment words to be used in your analysis. These lists can also be downloaded from the unit website.

AirbnbAI would like you to use RapidMiner to address the following tasks:

**Task A:** Develop a process model to determine if a significant correlation exists in the dataset between:

- the raw sentiment score (calculated as total positive words - total negative words) in all customer review comments of a property, and
- each property's review score rating.

**Task B:** Develop a predictive model to estimate the review score ratings of all properties located **outside** of the Melbourne Central Business District (CBD), using relevant predictor attributes in the data set. For this purpose, Melbourne CBD area is defined as being within the following boundaries:

- Longitude > 144.9 and < 145.06
- Latitude > -37.95 and < -37.75

**Task C:** AirBNB is concerned when any of the review score attributes (accuracy, checkin, cleanliness, communication, location and value) of a property drops below 10, especially when this happens for multiple review score attributes for a particular property. For this reason, you are asked to develop a process model to identify the **top 3 most frequently co-occurring review score attributes that drop below 10** for properties across the full dataset.

- **The dataset, report templates, and additional important notes for this assignment are available on the unit site on CloudDeakin.**
- **You must use the provided template for your report.** Your final report must adhere to page limits as only pages within the limits will be marked. It is essential that the executive summary section of your report is written for a non-technical reader (e.g., a senior manager at AirBnB) and that the remaining parts of the report are written for a technical reader (e.g., a business analyst or data scientist).
- **You must use RapidMiner available from [Deakin Apps and Desktops Anywhere \(ADA\)](#) for your analytical process modelling.**
- The consistency of your RapidMiner file(s) will be checked against the results in your report. **You must not modify the data file provided for this assignment before importing it into RapidMiner.**

## Learning Outcomes

This task allows you to demonstrate your achievement towards the Unit Learning Outcomes (ULOs) which have been aligned to the [Deakin Graduate Learning Outcomes](#) (GLOs). Deakin GLOs describe the knowledge and capabilities graduates acquire and can demonstrate on completion of their course. This assessment task is an important tool in determining your achievement of the ULOs. If you do not demonstrate achievement of the ULOs you will not be successful in this unit. You are advised to familiarise yourself with these ULOs and GLOs as they will inform you on what you are expected to demonstrate for successful completion of this unit.

The learning outcomes that are aligned to this assessment task are:

Unit Learning Outcomes (ULOs)	Graduate Learning Outcomes (GLOs)
ULO2: Understand and apply predictive analytics techniques in real-world situations.  ULO3: Apply an integrated understanding of current techniques and trends in predictive analytics to the business environment.	GLO1: Discipline-specific knowledge and capabilities - Demonstrate a specialised and integrated understanding of contemporary body of knowledge of business analytics to research, design and implement projects with creativity and initiative.  GLO3: Digital literacy - Expertise in using business analytics technologies to independently source information, analyse complex business data and disseminate findings.

## Submission

You are required to submit **partial submissions and your final submission** of your report and RapidMiner process files.

You must submit your assignment in the Assignment Dropbox in the unit CloudDeakin site on or before the due date. **No email submissions will be accepted.**

The files and format for all submissions are:

- Your **report** according to the submission template **as a PDF file.**
- all **RapidMiner process files** (in the RMP format) **combined as a single ZIP file.**

Submitting a hard copy of this assignment is not required. You must keep a backup copy of every assignment you submit until the marked assignment has been returned to you. In the unlikely event that one of your assignments is misplaced you will need to submit your backup copy.

Any work you submit may be checked by electronic or other means for the purposes of detecting collusion and/or plagiarism and for authenticating work.

When you submit an assignment through your CloudDeakin unit site, you will receive an email to your Deakin email address confirming that it has been submitted. You should check that you can see your assignment in the Submissions view of the Assignment Dropbox folder after upload and check for, and keep, the email receipt for the submission.

## Marking and feedback

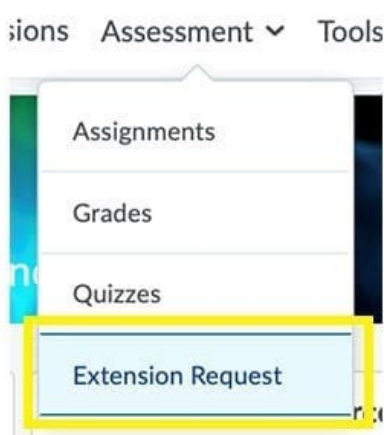

The marking rubric indicates the assessment criteria for this task. It is available in the CloudDeakin unit site in the Assessment folder, under Assessment Resources. Criteria act as a boundary around the task and help specify what assessors are looking for in your submission. The criteria are drawn from the ULOs and align with the GLOs. You should familiarise yourself with the assessment criteria before completing and submitting this task.

Students who submit their work by the due date will receive their marks and feedback on CloudDeakin 15 working days after the submission date.

## Extensions

**Extensions can only be granted for exceptional and/or unavoidable circumstances outside of your control.**

Requests for extensions must be made by 12 noon on the submission date using the online Extension Request form under the Assessment tab on the unit CloudDeakin site. All requests for extensions should be supported by appropriate evidence (e.g., a medical certificate in the case of ill health).

Applications for extensions after 12 noon on the submission date require University level [special consideration](#) and these applications must be submitted via StudentConnect in your DeakinSync site.

## Late submission penalties

If you submit an assessment task after the due date without an approved extension or special consideration, 5% will be deducted from the available marks for each day after the due date up to seven days\*. Work submitted more than seven days after the due date will not be marked and will receive 0% for the task. The Unit Chair may refuse to accept a late submission where it is unreasonable or impracticable to assess the task after the due date. \*'Day' means calendar day for electronic submissions and working day for paper submissions.

An example of how the calculation of the late penalty based on an assignment being due on a Thursday at 8:00pm is as follows:

- 1 day late: submitted after Thursday 11:59pm and before Friday 11:59pm – 5% penalty.
- 2 days late: submitted after Friday 11:59pm and before Saturday 11:59pm – 10% penalty.
- 3 days late: submitted after Saturday 11:59pm and before Sunday 11:59pm – 15% penalty.
- 4 days late: submitted after Sunday 11:59pm and before Monday 11:59pm – 20% penalty.
- 5 days late: submitted after Monday 11:59pm and before Tuesday 11:59pm – 25% penalty.
- 6 days late: submitted after Tuesday 11:59pm and before Wednesday 11:59pm – 30% penalty.
- 7 days late: submitted after Wednesday 11:59pm and before Thursday 11:59pm – 35% penalty.

The Dropbox closes the Thursday after 11:59pm AEST/AEDT time.

## Support

The Division of Student Life provides a range of [Study Support](#) resources and services, available throughout the academic year, including **Writing Mentor** and **Maths Mentor** online drop ins and the SmartThinking 24 hour writing feedback service at [this link](#). If you would prefer some more in depth and tailored support, [make an appointment online with a Language and Learning Adviser](#).

## Referencing and Academic Integrity

Deakin takes academic integrity very seriously. It is important that you (and if a group task, your group) complete your own work in every assessment task. Any material used in this assignment that is not your original work must be acknowledged as such and appropriately referenced. You can find information about referencing (and avoiding breaching academic integrity) and other study support resources at the following website: <http://www.deakin.edu.au/students/study-support>

## Your rights and responsibilities as a student

As a student you have both rights and responsibilities. Please refer to the document ***Your rights and responsibilities as a student*** in the Unit Guide & Information section in the Content area in the CloudDeakin unit site.
